HC and C = Carbon Steel with Hard Chrome Finish. SS and S = Stainless Steel - Rust Resistant. A blade with a Hard Chrome finish will be easier to sharpen and stay sharper longer, but may rust. A Stainless Steel blade will not rust. Stainless Steel blades are the most popular on Hobart and Berkel slicers, while most Globe slicers use Hard Chrome blades. Installation of a new blade may require changing bearings, shims and any other worn components to avoid blade wobble.

**Note: Alfa recommends that slicer blades be installed by qualified service technicians only. Always replace both sharpening stones when replacing a blade.**

The above parts are sold by Alfa International as replacement parts for Univex, Intedge, Bizerba, Fleetwood and General Slicers. Alfa is not affiliated with these firms.

MEAT SLICERS

## SLICER KNIFE SAFETY COVER

**EFFECTIVE** – The most common Slicer injury occurs when the Knife is exposed for service or cleaning. Using a Safety Cover whenever the Knife is exposed will help prevent loss of time and money due to injury.

**SIMPLE** – Molded in lightweight, durable yellow polystyrene plastic, these covers attach in seconds with built-in magnets. They are dishwasher safe and easily stored.
