

## Auto Safety Master SAFETY LIDLIFTER

### CAN OPENER INSTRUCTIONS

**1.** Place on top of can with two half circles lined up with can rim and turning knob pointing at 11 and 5 o'clock. (2 gears underneath will be apart in open position.)

**3.** Turn knob counter-clockwise to release.

**2.** Turn knob clockwise. Noting where starting on the can. The opener will automatically grip lid and begin to cut. After a full circle around the edge of the can you will feel less resistance. Stop turning – can is open.

**4.** Use mini-pliers by pushing button on opposite side to operate. Grip rim of lid between pliers and lift lid up, cleanly and easily.

**Warning:** Improper placement of can opener on cans could create burrs, which can cause injury. Only make one full circle – second turn might result in leaving burrs or metal shavings that can cause injury. Not intended for commercial-size cans.

### BOTTLE, CAN & JAR OPENER INSTRUCTIONS

**Flip Tops** Classic church key opens flip top bottles.

**Pull-tab Lids** Slide beak into loop of pull-tab lid and use round back as leverage to open lid easily and safely.

**Plastic Bottle Caps** Fits various sizes of plastic bottle caps. Press firmly and twist counter clockwise. For best results grip tool over the cap as pictured.

**Jars** By breaking the seal you will easily open lids of jars. Lightly pull up on handle. Remove and unscrew.

**Cleaning:** Simply wipe with a dry towel. Do Not Put in Dishwasher!
