CASK BREATHER

A cask breather is utilized to extend the life of cask ale by replacing the head space with CO_2 at atmospheric pressure. Note: the use of CO_2 is simply a blanket to protect the ale from exposure to oxygen – not as a pressure source for dispensing. Attach the pressure hose from a CO_2 regulator which has been set at about 5 psi. One cask breather can be used for multiple casks. Order a CASK-B-S spigot for each cask.

PART NO.	DESCRIPTION
CASK-B	Cask breather only
CASK-B-S	Cask breather spigot only
842-15-PP	Double gauge CO_2 regulator, 0 – 15 psi - Premium Plus
8011-15-PP	CO_2 regulator, 1 pressure up to 15 psi / 1 product - Premium Plus
