6" Curved Semi-Stiff Knife WP716

KNIFE SAFETY TIPS

Using knives correctly will prevent dangerous and costly injuries to your employees.

- Only use a knife for its intended purposes.
- Do not leave knives soaking in a sink. Exposed edges are difficult to see against a stainless steel sink.
- Be aware of excessive force, which is a sign of worn out and dull blade edges.
- Keep blade motions away from the body and co-workers.
- Implement a Knife Safety Training Program. (See page 31.)
